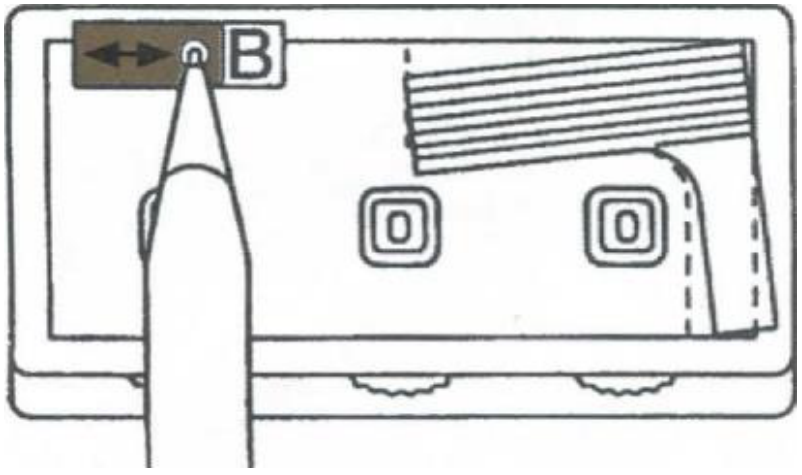
Instructions for use of
Combi-Code L0355k

This lock system does not allow your code to be changed
unintentionally (patents pending).

To set your personal combination follow these steps:

1. The dials must show 0-0-0.
2. Open the lock by pressing the lever in direction C and hold it in this position.
3. In the opening where the hasp enters the lock you will see the bronze coloured code-setting plate and the letter B.
4. Push the bronze coloured code-setting plate with the tip of a ball-point pen towards the letter B until the letter A appears. Now you can release the lever.
5. Set your secret combination by turning the wheels.
6. Return the bronze coloured code-setting plate again using the tip of a ball-point pen until the letter B reappears. The lever now returns automatically to the original position and your new code is set.
7. **Make sure you note your code carefully and check that the lock functions correctly.**

You can only lock your "COMBI-CODE" if the correct combination is set.


If you want to change to a new combination repeat steps 2-7.
